

Content

Introduction.	5
Chapter 1 – Adding Value in the Decision Analysis	13
1.1. Adequacy of the Decision Tools	14
1.2. Multiply Decision Analysis	33
1.3. Certainty Equivalent Approach in the Project Evaluation.	42
Chapter 2 – Applying the Metrics of Assets Performance	49
2.1. Estimation and Forecasting of the Volatility of Assets	50
2.2. Modelling the Cost of Capital for Efficiency of Assets	68
2.3. Assessment of the Assets Value in the Option Approach	80
Chapter 3 – Evaluating the Project Default	99
3.1. Appraisal of the Decline in the Assets Value	100
3.2. Risk Budgeting Process	108
3.3. Allocation of the Capital at Risk	122
Chapter 4 – Funding Adjusted to the Project	129
4.1. Modelling Interest Rates of the Funding Sources.	130
4.2. Optimizing the Funding Structure.	138
4.3. Hedging the Risk of Funding Instruments	143
Chapter 5 – Modeling Project’s Effectiveness	155
5.1. Framing the Project Value in Monte Carlo Simulation	156
5.2. Computation of the Initial Value and the Volatility of the Project	164
5.3. Sensitivity Analysis in the Binomial Option Model	173
