

Preface

Part 1: Beneficial Insect Ecology

1. Pest Control with Beneficial Insects

What are Beneficial Insects? ~ Pest Control and Farming ~ Enhancing Beneficial Insect Populations ~ Approaches to Biocontrol ~ Common Predators and Parasitoids: Their Habitat and Prey

2. Why Farm with Native Beneficial Insects?

Pest Control ~ Benefits beyond Pest Control ~ Case Study: Pest Management in Washington State Vineyards ~ Case Study: Milkweed, Stink Bugs, and Georgia Cotton

3. Evaluating Beneficial Insect Habitat

Habitat Essentials ~ Farm Practices Checklist ~ Case Study: Beneficial Insects Save Christmas

Part 2: Improving Beneficial Insect Habitat

4. Designing New Beneficial Insect Habitat

What Beneficial Insects Need ~ Habitat Size and Location ~ Wildflower Selection

5. Native Plant Field Borders

Establishing Borders from Seed ~ Site Preparation ~ Seeding ~ Long-Term Maintenance ~ Sample Seed Mixes for Native Plant Field Borders

6. Insectary Strips

Perennials or Annuals? ~ Plant Insectary Strips ~ Case Study: An Insectary Seed Mix for New Mexico Pumpkins ~ Sample Insectary Seed Mixes

7. Hedgerows

Installing a New Hedgerow ~ Revitalizing Old Fencerows ~ Sample Hedgerow Plant Mixes ~ Case Study: Hedgerows on California Central Valley Farms

8. Cover Crops

Species Selection ~ Establishing a Cover Crop ~ Case Study: A Better Farm for Beneficials

9. Conservation Buffers

Contour Buffer Strips ~ Grassed Waterways ~ Riparian Buffers and Filter Strips ~ Shelterbelts and Windbreaks ~ Organic Farm Buffers ~ Case Study: Buffer Strips for Soybean Aphid Control

10. Beetle Banks and Other Shelters

Beetle Banks ~ Tunnel Nests ~ Wasp Shelters ~ Brush Piles ~ Insect Hotels ~ Case Study: Banking on Beetles in Oregon

Part 3: Managing Beneficial Insect Habitat

11. Reducing Pesticide Impacts

If You Must Use Pesticides ~ Pesticide Selection ~ Microbial Insecticides and Nematodes ~ Alternatives to Pesticides ~ Controlling Spray Drift ~ Case Study: Designing Windbreaks to Limit Pesticide Drift ~ Case Study: Biological Mite Control in Pennsylvania Apple Orchards

12. Long-Term Habitat Management
Disking, Mowing, and Burning ~ Grazing ~ Rotating Habitat
Disturbance ~ Interseeding Wildflowers ~ Case Study: Beneficial
Insect Habitat on an Oklahoma Farm and Ranch

Part 4: Common Beneficial Insects and Their Kin

PREDATORY INSECTS

Assassin Bugs, Ambush Bugs
Big-Eyed Bugs
Damsel Bugs
Minute Pirate Bugs, Insidious Flower Bugs
Predatory Stink Bugs
Mantids
Green Lacewings, Brown Lacewings
Checkered Beetles
Firefly Beetles, Fireflies, Lightning Bugs
Ground Beetles
Tiger Beetles
Lady Beetles, Lady Bugs, Ladybird Beetles
Soft-Winged Flower Beetles
Soldier Beetles
Rove Beetles
Flower Flies, Hover Flies
Predatory Wasps

PARASITOIDS

Parasitoid Wasps
Scarab-Hunting Wasps
Tachinid Flies

NONINSECT BENEFICIAL PREDATORS

Jumping Spiders, Wolf Spider, Orb Weaver Spiders,
Sheet-Weaving Spiders
Harvestmen
Predatory Mites

Part 5: Plants for Conservation Biocontrol

Native Wildflowers
Native Flowering Trees and Shrubs
Native Grasses
Cover Crops and Nonnative Insectary Plants

Part 6: Appendix
