## PART I Signal and System Analysis 1

### 1 Signal Processing 3

1.1	Motivation 3
1.1.1	Digital and Analog Processing 4
1.1.2	Total Harmonic Distortion (THD) 6
1.1.3	A Notch Filter 7
1.1.4	Active Noise Control 7
1.1.5	Video Aliasing 10
1.2	Signals and Systems 11
1.2.1	Signal Classification 11
1.2.2	System Classification 16
1.3	Sampling of Continuous-time Signals 21
1.3.1	Sampling as Modulation 21
1.3.2	Aliasing 23
1.4	Reconstruction of Continuous-time Signals 26
1.4.1	Reconstruction Formula 26
1.4.2	Zero-order Hold 29
1.5	Prefilters and Postfilters 33
1.5.1	Anti-aliasing Filter 33
1.5.2	Anti-imaging Filter 37
*1.6	DAC and ADC Circuits 39
1.6.1	Digital-to-analog Converter (DAC) 39
1.6.2	Analog-to-digital Converter (ADC) 41
1.7	The FDSP Toolbox 46
1.7.1	FDSP Driver Module 46
1.7.2	Toolbox Functions 46
1.7.3	GUI Modules 49
1.8	GUI Software and Case Studies 52
1.9	Chapter Summary 60

\*Sections marked with a \* contain more advanced or specialized material that can be skipped without loss of continuity.

<b>1.10 Problems</b>	<b>62</b>
<b>1.10.1 Analysis and Design</b>	<b>62</b>
<b>1.10.2 GUI Simulation</b>	<b>67</b>
<b>1.10.3 MATLAB Computation</b>	<b>68</b>

2 Discrete-time Systems in the Time Domain 70

<b>2.1</b>	Motivation	70
	2.1.1 Home Mortgage	71
	2.1.2 Range Measurement with Radar	72
<b>2.2</b>	Discrete-time Signals	74
	2.2.1 Signal Classification	74
	2.2.2 Common Signals	79
<b>2.3</b>	Discrete-time Systems	82
<b>2.4</b>	Difference Equations	86
	2.4.1 Zero-input Response	87
	2.4.2 Zero-state Response	90
<b>2.5</b>	Block Diagrams	94
<b>2.6</b>	The Impulse Response	96
	2.6.1 FIR Systems	97
	2.6.2 IIR Systems	98
<b>2.7</b>	Convolution	100
	2.7.1 Linear Convolution	100
	2.7.2 Circular Convolution	103
	2.7.3 Zero Padding	105
	2.7.4 Deconvolution	108
	2.7.5 Polynomial Arithmetic	109
<b>2.8</b>	Correlation	110
	2.8.1 Linear Cross-correlation	110
	2.8.2 Circular Cross-correlation	114
<b>2.9</b>	Stability in the Time Domain	117
<b>2.10</b>	GUI Software and Case Studies	119
<b>2.11</b>	Chapter Summary	129
<b>2.12</b>	Problems	132
	2.12.1 Analysis and Design	133
	2.12.2 GUI Simulation	139
	2.12.3 MATLAB Computation	141

3 Discrete-time Systems in the Frequency Domain 145

<b>3.1</b>	Motivation	145	
	<b>3.1.1</b>	Satellite Attitude Control	146
	<b>3.1.2</b>	Modeling the Vocal Tract	148
<b>3.2</b>	Z-transform Pairs	149	
	<b>3.2.1</b>	Region of Convergence	150
	<b>3.2.2</b>	Common Z-transform Pairs	153
<b>3.3</b>	Z-transform Properties	157	
	<b>3.3.1</b>	General Properties	157
	<b>3.3.2</b>	Causal Properties	162

3.4	Inverse Z-transform	164
3.4.1	Noncausal Signals	164
3.4.2	Synthetic Division	164
3.4.3	Partial Fractions	166
3.4.4	Residue Method	170
3.5	Transfer Functions	174
3.5.1	The Transfer Function	174
3.5.2	Zero-State Response	176
3.5.3	Poles, Zeros, and Modes	177
3.5.4	DC Gain	180
3.6	Signal Flow Graphs	181
3.7	Stability in the Frequency Domain	184
3.7.1	Input-output Representations	184
3.7.2	BIBO Stability	185
3.7.3	The Jury Test	188
3.8	Frequency Response	191
3.8.1	Frequency Response	191
3.8.2	Sinusoidal Inputs	193
3.8.3	Periodic Inputs	196
3.9	System Identification	198
3.9.1	Least-squares Fit	199
3.9.2	Persistently Exciting Inputs	202
3.10	GUI Software and Case Studies	203
3.10.1	<code>g_sysfreq</code> : Discrete-time System Analysis in the Frequency Domain	203
3.11	Chapter Summary	213
3.12	Problems	215
3.12.1	Analysis and Design	215
3.12.2	GUI Simulation	225
3.12.3	MATLAB Computation	226

## 4 Fourier Transforms and Spectral Analysis 228

4.1	Motivation	228
4.1.1	Fourier Series	229
4.1.2	DC Wall Transformer	230
4.1.3	Frequency Response	232
4.2	Discrete-time Fourier Transform (DTFT)	233
4.2.1	DTFT	233
4.2.2	Properties of the DTFT	236
4.3	Discrete Fourier Transform (DFT)	241
4.3.1	DFT	241
4.3.2	Matrix Formulation	243
4.3.3	Fourier Series and Discrete Spectra	245
4.3.4	DFT Properties	248
4.4	Fast Fourier Transform (FFT)	256
4.4.1	Decimation in Time FFT	256
4.4.2	FFT Computational Effort	260
4.4.3	Alternative FFT Implementations	262

<b>4.5</b>	Fast Convolution and Correlation	263
	<b>4.5.1</b> Fast Convolution	263
	* <b>4.5.2</b> Fast Block Convolution	267
	<b>4.5.3</b> Fast Correlation	270
<b>4.6</b>	White Noise	274
	<b>4.6.1</b> Uniform White Noise	274
	<b>4.6.2</b> Gaussian White Noise	278
<b>4.7</b>	Auto-correlation	282
	<b>4.7.1</b> Auto-correlation of White Noise	282
	<b>4.7.2</b> Power Density Spectrum	284
	<b>4.7.3</b> Extracting Periodic Signals from Noise	286
<b>4.8</b>	Zero Padding and Spectral Resolution	291
	<b>4.8.1</b> Frequency Response Using the DFT	291
	<b>4.8.2</b> Zero Padding	295
	<b>4.8.3</b> Spectral Resolution	296
<b>4.9</b>	Spectrogram	299
	<b>4.9.1</b> Data Windows	299
	<b>4.9.2</b> Spectrogram	301
<b>4.10</b>	Power Density Spectrum Estimation	304
	<b>4.10.1</b> Bartlett's Method	304
	<b>4.10.2</b> Welch's Method	308
<b>4.11</b>	GUI Software and Case Studies	311
<b>4.12</b>	Chapter Summary	319
<b>4.13</b>	Problems	323
	<b>4.13.1</b> Analysis and Design	323
	<b>4.13.2</b> GUI Simulation	329
	<b>4.13.3</b> MATLAB Computation	331

**PART II** Digital Filter Design 335

## 5 Filter Design Specifications 337

5.1	Motivation	337
	5.1.1 Filter Design Specifications	338
	5.1.2 Filter Realization Structures	339
5.2	Frequency-selective Filters	342
	5.2.1 Linear Design Specifications	343
	5.2.2 Logarithmic Design Specifications (dB)	348
5.3	Linear-phase and Zero-phase Filters	350
	5.3.1 Linear Phase	350
	5.3.2 Zero-phase Filters	356
5.4	Minimum-phase and Allpass Filters	358
	5.4.1 Minimum-phase Filters	359
	5.4.2 Allpass Filters	362
	5.4.3 Inverse Systems and Equalization	366
5.5	Quadrature Filters	367
	5.5.1 Differentiator	367
	5.5.2 Hilbert Transformer	369
	5.5.3 Digital Oscillator	372

- 5.6 Notch Filters and Resonators 374
    - 5.6.1 Notch Filters 374
    - 5.6.2 Resonators 376
  - 5.7 Narrowband Filters and Filter Banks 378
    - 5.7.1 Narrowband Filters 378
    - 5.7.2 Filter Banks 381
  - 5.8 Adaptive Filters 383
  - 5.9 GUI Software and Case Study 386
    - 5.9.1 g\_filters: Evaluation of Digital Filter Characteristics 386
  - 5.10 Chapter Summary 392
  - 5.11 Problems 395
    - 5.11.1 Analysis and Design 395
    - 5.11.2 GUI Simulation 403
    - 5.11.3 MATLAB Computation 404

6 FIR Filter Design 406

- |             |                                          |                                       |     |
|-------------|------------------------------------------|---------------------------------------|-----|
| <b>6.1</b>  | Motivation                               | 406                                   |     |
|             | <b>6.1.1</b>                             | Numerical Differentiators             | 407 |
|             | <b>6.1.2</b>                             | Signal-to-noise Ratio                 | 409 |
| <b>6.2</b>  | Windowing Method                         | 411                                   |     |
|             | <b>6.2.1</b>                             | Truncated Impulse Response            | 412 |
|             | <b>6.2.2</b>                             | Windowing                             | 416 |
| <b>6.3</b>  | Frequency-sampling Method                | 423                                   |     |
|             | <b>6.3.1</b>                             | Frequency Sampling                    | 424 |
|             | <b>6.3.2</b>                             | Transition-band Optimization          | 425 |
| <b>6.4</b>  | Least-squares Method                     | 430                                   |     |
| <b>6.5</b>  | Equiripple Filters                       | 434                                   |     |
|             | <b>6.5.1</b>                             | Minimax Error Criterion               | 434 |

|             | <b>6.6.1</b>                             | Differentiators                       | 442 |
|             | <b>6.6.2</b>                             | Hilbert Transformers                  | 445 |
| <b>6.7</b>  | Quadrature Filters                       | 448                                   |     |
|             | <b>6.7.1</b>                             | Generation of a Quadrature Pair       | 448 |
|             | <b>6.7.2</b>                             | Quadrature Filter                     | 450 |
|             | <b>6.7.3</b>                             | Equalizer Design                      | 453 |
| <b>6.8</b>  | Filter Realization Structures            | 457                                   |     |
|             | <b>6.8.1</b>                             | Direct Forms                          | 457 |
|             | <b>6.8.2</b>                             | Cascade Form                          | 459 |
|             | <b>6.8.3</b>                             | Lattice Form                          | 461 |
| <b>*6.9</b> | Finite Word Length Effects               | 464                                   |     |
|             | <b>6.9.1</b>                             | Binary Number Representation          | 465 |
|             | <b>6.9.2</b>                             | Input Quantization Error              | 466 |
|             | <b>6.9.3</b>                             | Coefficient Quantization Error        | 470 |
|             | <b>6.9.4</b>                             | Roundoff Error, Overflow, and Scaling | 473 |
| <b>6.10</b> | GUI Software and Case Study              | 477                                   |     |
| <b>6.11</b> | Chapter Summary                          | 484                                   |     |

## 6.12 Problems 488

- 6.12.1 Analysis and Design 488
- 6.12.2 GUI Simulation 492
- 6.12.3 MATLAB Computation 494

7 IIR Filter Design 499

<b>7.1</b>	Motivation	499	
	<b>7.1.1</b>	Tunable Plucked-string Filter	500
	<b>7.1.2</b>	Colored Noise	502
<b>7.2</b>	Filter Design by Pole-zero Placement	504	
	<b>7.2.1</b>	Resonator	504
	<b>7.2.2</b>	Notch Filter	508
	<b>7.2.3</b>	Comb Filters	510
<b>7.3</b>	Filter Design Parameters	514	
<b>7.4</b>	Classical Analog Filters	517	
	<b>7.4.1</b>	Butterworth Filters	517
	<b>7.4.2</b>	Chebyshev-I Filters	522
	<b>7.4.3</b>	Chebyshev-II Filters	525
	<b>7.4.4</b>	Elliptic Filters	526
<b>7.5</b>	Bilinear transformation Method	529	
<b>7.6</b>	Frequency Transformations	535	
	<b>7.6.1</b>	Analog Frequency Transformations	536
	<b>7.6.2</b>	Digital Frequency Transformations	539
<b>7.7</b>	Filter Realization Structures	541	
	<b>7.7.1</b>	Direct Forms	541
	<b>7.7.2</b>	Parallel Form	544
	<b>7.7.3</b>	Cascade Form	547
<b>*7.8</b>	Finite Word Length Effects	550	
	<b>7.8.1</b>	Coefficient Quantization Error	550
	<b>7.8.2</b>	Roundoff Error, Overflow, and Scaling	553
	<b>7.8.3</b>	Limit Cycles	557
<b>7.9</b>	GUI Software and Case Study	560	
<b>7.10</b>	Chapter Summary	567	
<b>7.11</b>	Problems	571	
	<b>7.11.1</b>	Analysis and Design	571
	<b>7.11.2</b>	GUI Simulation	575
	<b>7.11.3</b>	MATLAB Computation	577

**PART III Advanced Signal Processing 581**

8 Multirate Signal Processing 583

<b>8.1</b>	Motivation	583	
	<b>8.1.1</b>	Narrowband Filter Banks	584
	<b>8.1.2</b>	Fractional Delay Systems	586
<b>8.2</b>	Integer Sampling Rate Converters	587	
	<b>8.2.1</b>	Sampling Rate Decimator	587
	<b>8.2.2</b>	Sampling Rate Interpolator	588

8.3	Rational Sampling Rate Converters	591
8.3.1	Single-stage Converters	591
8.3.2	Multistage Converters	593
8.4	Multirate Filter Realization Structures	596
8.4.1	Polyphase Decimator	596
8.4.2	Polyphase Interpolator	598
8.5	Narrowband Filters and Filter Banks	600
8.5.1	Narrowband Filters	600
8.5.2	Filter Banks	601
8.6	A Two-channel QMF Bank	607
8.6.1	Rate Converters in the Frequency Domain	608
8.6.2	An Alias-free QMF Bank	610
8.7	Oversampling ADC	612
8.7.1	Anti-aliasing Filters	612
8.7.2	Sigma-delta ADC	615
8.8	Oversampling DAC	620
8.8.1	Anti-imaging Filters	620
8.8.2	Passband Equalization	621
8.9	GUI Software and Case Study	623
8.10	Chapter Summary	630
8.11	Problems	633
8.11.1	Analysis and Design	633
8.11.2	GUI Simulation	640
8.11.3	MATLAB Computation	641

## 9 Adaptive Signal Processing 645

9.1	Motivation	645
9.1.1	System Identification	646
9.1.2	Channel Equalization	647
9.1.3	Signal Prediction	648
9.1.4	Noise Cancellation	648
9.2	Mean Square Error	649
9.2.1	Adaptive Transversal Filters	649
9.2.2	Cross-correlation Revisited	650
9.2.3	Mean Square Error	651
9.3	The Least Mean Square (LMS) Method	656
9.4	Performance Analysis of LMS Method	660
9.4.1	Step Size	660
9.4.2	Convergence Rate	663
9.4.3	Excess Mean Square Error	666
9.5	Modified LMS Methods	669
9.5.1	Normalized LMS Method	669
9.5.2	Correlation LMS Method	671
9.5.3	Leaky LMS Method	674
9.6	Adaptive FIR Filter Design	678
9.6.1	Pseudo-filters	678
9.6.2	Linear-phase Pseudo-filters	681

<b>9.7</b>	The Recursive Least-Squares (RLS) Method	684
<b>9.7.1</b>	Performance Criterion	684
<b>9.7.2</b>	Recursive Formulation	685
<b>9.8</b>	Active Noise Control	690
<b>9.8.1</b>	The Filtered- $x$ LMS Method	691
<b>9.8.2</b>	Secondary Path Identification	693
<b>9.8.3</b>	Signal-synthesis Method	695
<b>9.9</b>	Nonlinear System Identification	700
<b>9.9.1</b>	Nonlinear Discrete-time Systems	700
<b>9.9.2</b>	Grid Points	701
<b>9.9.3</b>	Radial Basis Functions	703
<b>9.9.4</b>	Adaptive RBF Networks	707
<b>9.10</b>	GUI Software and Case Study	713
<b>9.11</b>	Chapter Summary	718
<b>9.12</b>	Problems	721
<b>9.12.1</b>	Analysis and Design	721
<b>9.12.2</b>	GUI Simulation	725
<b>9.12.3</b>	MATLAB Computation	727

References and Further Reading 734

Appendix 1 Transform Tables 738

- 1.1 Fourier Series 738
- 1.2 Fourier Transform 739
- 1.3 Laplace Transform 741
- 1.4 Z-transform 743
- 1.5 Discrete-time Fourier Transform 744
- 1.6 Discrete Fourier Transform (DFT) 745

Appendix 2 Mathematical Identities 747
