Notation.....	13
Preface.....	19
Introduction	21
CHAPTER 1. Basis of structural design.....	27
1.1. Limit State Design – Basic requirements	27
1.2. Definition of reliability	29
1.3. Partial factors method	36
1.3.1. General	36
1.3.2. Principles of limit state design, design situations	37
1.3.3. Basic variables.....	37
1.3.3.1. Actions and environmental influences	37
1.3.3.2. Material and product properties	44
1.3.4. Verification of the limit states by partial factors method.....	47
1.3.4.1. Ultimate Limit State (ULS)	47
1.3.4.1.1. General	47
1.3.4.1.2. Combination of actions for persistent or transient design situations.....	48
1.3.4.1.3. Combination of actions for accidental design situation	50
1.3.4.2. Serviceability Limit States (SLS)	50
1.3.4.2.1. General	50
1.3.4.2.2. Combinations of actions for serviceability limit states checking	51
CHAPTER 2. Structural Analysis.....	53
2.1. General requirements	53
2.2. Cases and load arrangements	54

2.3. Geometrical imperfections	55
2.3.1. General	55
2.3.2. Global analysis.....	55
2.4. Idealization of the structure.....	57
2.4.1. Structural models for overall design.....	57
2.4.2. Geometrical data	59
2.4.2.1. Effective width of flanges (valid for all limit states).....	59
2.4.2.2. Effective span of beams and slabs in buildings	61
2.5. Methods of analysis.....	63
2.5.1. Linear elastic analysis	63
2.5.2. Linear elastic analysis with limited redistribution.....	65
2.5.3. Plastic analysis	67
2.5.3.1. General	67
2.5.3.1.1. Static method.....	68
2.5.3.1.2. Kinematic method.....	68
2.5.3.2 Plastic analysis for beams, frames and slabs.....	68
2.5.3.2.1. Rotation capacity.....	69
2.5.3.2.2. Analysis with strut and tie models.....	71
CHAPTER 3. Materials properties and durability criteria	75
3.1. Concrete	75
3.1.1. Strength of concrete	75
3.1.1.1. Compressive strength.....	75
3.1.1.2. Tensile strength	80
3.1.1.3. Classes of concrete	82
3.1.2. Deformation of concrete	83
3.1.2.1. Elastic deformation.....	83
3.1.2.2. Poisson's ratio and coefficient of thermal expansion.....	85
3.1.2.3. Creep and shrinkage of concrete	85
3.1.2.3.1. Creep of concrete	86
3.1.2.3.2. Shrinkage of concrete	90
3.1.3. Stress-strain relations.....	93
3.1.4. Design compressive and tensile strengths.....	96
3.2. Reinforcing steel.....	97
3.2.1. General requirements	97
3.2.2. Properties of reinforcing steel.....	98
3.2.3. Design assumptions	100

3.3. Durability and concrete cover to reinforcement.....	101
3.3.1. General requirements	101
3.3.2. Concrete deterioration mechanism	102
3.3.2.1 Chemical attack.....	102
3.3.2.2. Physical attack	104
3.3.3. Environmental conditions	105
3.3.4. Concrete cover.....	107
CHAPTER 4. Ultimate limit states.....	111
4.1. Bending and Bending with Axial Load.....	111
4.1.1. Bending	111
4.1.1.1. Flexural behavior of beams.....	111
Stage I (Uncracked concrete sections).	111
Stage II (Concrete Cracked).	113
Stage III (ultimate/strength).....	115
4.1.1.2. Assumptions	118
4.1.1.3. Rectangular-parabolic compressive stress block in concrete	124
4.1.1.3.1. Rectangular cross-section	124
4.1.1.3.2. Flanged cross-section	140
4.1.1.4. Rectangular compressive stress block in concrete.....	147
4.1.1.4.1. Rectangular cross-section	147
4.1.1.4.2. Flanged cross-section	152
4.1.2 Bending with Axial Load	156
4.1.2.1. Behaviour of short column under the axial load and uniaxial moment	156
4.1.2.2. Rectangular-parabolic stress block in concrete	159
4.1.2.2.1 Modes of failure of columns and the basic equations formulation.....	159
4.1.2.2.2 Calculation of the required area of the reinforcement.....	168
4.1.2.3. Equivalent rectangular compressive stress block in concrete ...	175
4.1.2.3.1. Modes of failure and the basic equations formulation	177
4.1.2.3.2. Calculation of the required area of the reinforcement	181
4.1.2.3.3. Cross-section resistance checking based on the rectangular compressive stress block.....	186
4.1.2.4. Interaction diagram.....	187

4.1.3. Analysis of second order effects with axial load	188
4.1.3.1. General requirements and definitions in accordance with EN 1992 [N3]	188
4.1.3.2. Simplified criteria for second order effects.....	189
4.1.3.2.1. Slenderness criterion for isolated members.....	189
4.1.3.2.2. Slenderness and effective length of isolated members	190
4.1.3.3. Design of braced columns	193
4.1.3.3.1. Design of braced columns, when $\lambda \leq \lambda_{lim}$	193
4.1.3.3.2. Design of braced columns, when $\lambda > \lambda_{lim}$. Methods of analysis.....	193
4.1.3.4. Biaxial bending.....	199
4.2. Shear.....	201
4.2.1. Shear capacity of RC-beams	201
4.2.1.1. Formation of diagonal cracks due to shear.....	201
4.2.1.1.1. Principle tensile stress in an elastic beam	201
4.2.1.1.2. Types of cracks, modes of shear failure and crack patterns.....	203
4.2.1.2. Shear transfer in cracked concrete.....	208
4.2.1.3. Internal forces in a beam without stirrups	210
4.2.1.4. Behaviour of beams with web reinforcement by [15]	211
4.2.2. Truss Analogy by Ritter and Mörsh and its modification.....	213
4.2.2.1. The variable strut inclination method.....	216
4.2.2.1.1. Basic equations	216
4.2.2.1.2. General design requirements in accordance with EN 1992 [N3]	220
4.2.3. Shear in accordance with fib Model Code 2010 (MC 2010) [N5]	228
4.2.3.1. General	228
4.2.3.2. Design shear force and shear resistance.....	229
4.2.3.3. Levels of approximation.....	230
4.2.3.4. Design equations for region cracked in bending.....	231
4.2.3.4.1. General	231
4.2.3.4.2. Level I Approximation.....	233
4.2.3.4.3. Level II Approximation	234
4.2.3.4.4. Level III Approximation	235
4.3. Punching shear	237
4.3.1. General consideration	237
4.3.2. Punching shear failure modes in flat slabs.....	238
4.3.3. Basic control perimeter	239

4.3.4. Punching shear calculation.....	243
4.3.4.1. General.....	243
4.3.4.2. Punching shear resistance of slabs and column bases without shear reinforcement.....	248
4.3.4.3. Punching shear resistance of slabs and column bases with shear reinforcement.....	249
4.3.5. Punching shear calculation in accordance with fib MC 2010 [N5]	252
4.3.5.1. General.....	252
4.3.5.2. Design shear force, shear-resisting effective depth and control perimeter	253
4.3.5.3. Punching shear resistance calculation	257
4.3.5.3.1. Design equations.....	257
4.3.5.3.2. Calculation of rotation around the support region ...	259
4.3.5.4. Integrity reinforcement.....	262
CHAPTER 5. Serviceability Limit States (SLS)	265
5.1 General provisions	265
5.1.1. Assessment of design action effects	266
5.1.2. Material properties.....	266
5.1.3. Modulus of elasticity.....	267
5.1.4. Creep coefficient and free shrinkage strain	267
5.1.5. Tensile strength of concrete	267
5.2. Control of cracking	268
5.2.1. General considerations.....	268
5.2.2. Causes of cracking.....	268
5.2.3. Crack width limits.....	269
5.2.4. Mechanism of cracking	271
5.2.5. Derivation of crack width prediction formula	273
5.2.6. Control of cracking without direct calculation.....	278
5.2.7. Minimum reinforcement areas.....	280
5.3. Deflection control	282
5.3.1. General considerations.....	282
5.3.2. Calculation of deflection	283
5.3.2.1. Calculation of curvature	284
5.3.2.1.1. Uncracked section.....	284
5.3.2.1.2. Cracked section	285
5.3.2.1.3. Creep and shrinkage effects.....	286

5.3.2.2. Calculation of the deflection from curvature.....	287
5.3.2.3. Cases, where deflection calculations may be omitted. Basis of span-effective depth ratios	290
CHAPTER 6. Detailing	293
6.1. Discussion of the general requirements	293
6.1.1. Cover of bar reinforcement.....	293
6.1.2. Spacing of bars.....	295
6.1.3. Mandrel diameters for bent bars	296
6.2. Anchorage of longitudinal reinforcement	298
6.2.1. General	298
6.2.2. Ultimate bond stress	299
6.2.3. Basic anchorage length.....	300
6.2.4. Design anchorage length.....	300
6.2.5. Anchorage of links and shear reinforcement	302
6.3. Detailing requirements for particular member types.....	303
6.3.1. Beams.....	303
6.3.1.1. Longitudinal reinforcement.....	303
6.3.1.2. Shear reinforcement	304
6.3.1.3. Curtailment of longitudinal tension reinforcement.....	305
6.3.1.4. Anchorage at supports	306
6.3.1.5. Skin reinforcement	308
6.3.1.6. Surface reinforcement	309
6.3.2. Slabs	309
6.3.2.1. Longitudinal reinforcement.....	309
6.3.2.2. Transverse reinforcement	311
6.3.2.3. Corner and edge reinforcement.....	311
6.3.2.4. Shear reinforcement	311
6.3.2.5. Anchorage and lap length	311
6.3.3. Columns	312
6.3.3.1. Longitudinal reinforcement.....	312
6.3.3.2. Transverse reinforcement	313
6.3.4. Walls.....	313
6.3.4.1. Vertical reinforcement.....	313
6.3.4.2. Horizontal reinforcement	314
6.3.4.3. Transverse reinforcement	314
6.3.5. Corbels.....	314
6.3.6. Reinforcement in flat slabs.....	315

CHAPTER 7. Slabs.....	319
7.1. General	319
7.2. Classification of concrete floor systems with one-way and two-way slabs.....	319
7.2.1. One-way and two-way slabs	319
7.2.1.1. One-way solid slabs	320
7.2.1.2. Two-way solid slabs	321
7.2.2. Beam-supported floors.....	322
7.2.2.1. Beam-and-girder floors.....	322
7.2.2.2. Band-beam floors.....	324
7.2.2.3. One-way joist floors.....	325
7.2.2.4. Two-way joist floors (waffle slabs).....	326
7.2.3. Beamless concrete floors	327
7.2.3.1. Waffle slabs.....	327
7.2.3.2 Flat plates	329
7.2.3.3. Flat slabs	330
7.3. Choice of type of slab floor	331
7.4. Design of concrete floor systems with one-way and two-way slabs.....	332
7.4.1. General	332
7.4.2. Fire resistance and durability requirements	332
7.4.2.1. Fire resistance	332
7.4.2.2. Durability.....	334
7.4.3. Structure actions	334
7.4.3.1. Distributed loads.....	334
7.4.3.2. Concentrated loads.....	335
7.4.4. Methods of analysis.....	336
7.4.5. Analysis of one-way and two-way slabs by semi-empirical coefficient methods.....	336
7.4.5.1. General	336
7.4.5.2. One-way slabs.....	337
7.4.5.3. Two-way spanning slabs on linear supports. Analysis with coefficient method	341
7.4.5.4. Flat slabs	345
7.4.5.4.1. Direct design method	345
7.4.5.4.2. Equivalent frame analysis.....	346
7.4.5.4.3. Effective shear forces in flat slabs	349
7.4.5.4.4. Irregular column layout.....	350
7.4.6. Yield Line Design	350

7.4.6.1. General	350
7.4.6.2. Upper and lower bound theorems.....	351
7.4.6.3. Rules for yield line	352
7.4.6.4. Design methods	355
7.4.6.4.1. Analysis by virtual work method.....	356
7.4.6.4.2. External work done by loads	356
7.4.6.4.3. Internal work done by resisting moments	356
7.4.6.4.4. The principles.....	358
7.4.6.5. Orthotropic reinforcement and skewed yield lines.....	359
7.4.6.6. Fan patterns at concentrated loads.....	361
7.4.6.7. Standard formulae for slabs design	362
7.4.7. Analysis of slabs by Finite Element (FE) Method.....	363
7.4.7.1. General.....	363
7.4.7.2. Element types	366
7.4.7.3. Modelling of support conditions	367
7.4.7.3.1. General aspects.....	367
7.4.7.3.2. Modelling of supports at single points or lines	367
7.4.7.4. Mesh density at support region.....	372
7.4.7.5. Choice of result sections	374
7.4.7.5.1. Result sections for moments.....	374
7.4.7.5.2. Result section for shear force	379
7.4.7.6. Interpreting results. Redistribution of sectional forces and moments	380
7.4.7.6.1. Design moments adjustment.....	380
7.4.7.6.2. Effect of simplification in the modelling in accordance with [17].....	381
7.4.7.6.3. Sectional forces and moments for reinforcement design. 381	381
7.4.7.7. Redistribution of reinforcement moments.....	383
7.4.7.7.1. Ultimate limit states	385
7.4.7.7.2. Simplified approach in accordance with EN 1992 [N3].....	387
7.4.7.7.3. Serviceability limit states.....	389
7.4.7.8. Punching shear.....	392
7.4.7.9. Validation	393
7.5. Detailing.....	394
7.5.1. Two-way slabs on linear supports.....	394
7.5.2. Flat slabs	396

ANNEX A. Worked examples	399
A.1. Ultimate limit states checking	399
A.1.1. Bending and Bending with axial force	399
A.1.1.1. Rectangular cross-section	399
A.1.1.2. T-shape (flanged) section.....	414
A.1.2. Shear.....	438
A.1.3. Punching	454
A.2. Serviceability limit states checking	457
A.2.1. Deflection control	457
A.2.2. Crack width control	468
ANNEX B. Design of reinforced concrete ribbed floor with one-way slab.....	477
ANNEX C. TERMS AND DEFINITIONS	523
ANNEX D. BAR AREAS AND PERIMETERS	531
Bibliography	533
List of tables.....	535
List of figures.....	538
