Preface

xix

1.	Introduction: Immediate Assessment of the Critically Ill	1
	ABCDE: Immediate Assessment and Intervention	2
	Early Warning: Track and Trigger	4
	Additional Monitoring	6
	Oxygen Treatment, Target Oxygen Saturation and the NEWS	6
	NEWS 2	6
	Communication: NEWS and SBAR	8
	Conclusion	9
	Further Reading	9
2.	Cardiology	11
	Introduction	11
	Common Clinical Problems	13
	Acute severe breathlessness	13
	Chest pain and atypical myocardial infarction	13
	Atrial fibrillation	13
	Immediate relevance of heart disease to other acute medical conditions	13
	Core Nursing Skills	14
	Anticipating problems	15
	Cardiac Failure	15
	Primary Problems in the Heart	16
	Heart muscle damage	16
	Valvular disease	17
	Rhythm disturbance	17
	Secondary Compensatory Mechanisms in Cardiac Failure	18
	An important new biomarker of cardiac failure: B-natriuretic peptide	19
	The specialist heart failure team	20
	Types of Heart Failure	21
	Left heart failure	21
	Right heart failure	21
	Congestive cardiac failure	21

Right heart failure and chronic obstructive pulmonary disease	21
Diastolic heart failure	22
Clinical Features and Management of Cardiac Failure	22
Characteristics of patients admitted acutely with cardiac failure	22
Principles of managing cardiac failure	23
Acute left ventricular failure	24
Acute on chronic congestive cardiac failure	27
Specialist input	31
Answering Patients' and Relatives' Questions in Cardiac Failure	31
Ischaemic Heart Disease	32
Chest Pain	32
Approach to the patient who has chest pain on the AMU	32
Acute Coronary Syndromes, NSTEMIs and Unstable Angina	35
Troponin T and troponin I in the assessment of chest pain	36
Risk stratification in the management of chest pain	37
Cocaine and the heart	37
What are the other causes of acute chest pain?	37
When to try GTN	38
What to say to the patient	38
Critical nursing tasks in the patient with chest pain	38
Sudden Cardiac Death	41
Atrial Fibrillation and Arterial Emboli	42
Causes of Atrial Fibrillation	44
Importance of Atrial Fibrillation	44
Uncontrolled atrial fibrillation	44
Complications of atrial fibrillation	46
Diagnosis of Atrial Fibrillation	47
Management of Atrial Fibrillation	47
Stroke prevention versus bleeding risk: CHAD ₂ DS ₂ -VAsC and HAS-BLED	48
Critical nursing tasks in atrial fibrillation	50
Important nursing tasks in atrial fibrillation	51
Answering Relatives' Questions in Atrial Fibrillation	51
Infective Endocarditis	51
How Infective Endocarditis Presents	52
Pyrexia of unknown origin	52
Catastrophic valve failure	52
Infected emboli	52
Role of the Acute Medical Unit in Suspected Endocarditis	52
Principles of management in the first 24 h	53
Drugs in the Management of Acute Heart Disease	54
Intravenous furosemide	54
Antiplatelet agents	55
Intravenous nitrates	55
Digoxin	56
Intravenous diltiazem	56

ACE inhibitors	57
Intravenous amiodarone	57
Spironolactone and eplerenone	58
References	58
3. Respiratory Medicine	59
Introduction	59
The Breathless Patient: The General Approach	60
Is this patient's breathlessness due to his heart or his lungs?	60
What tests will be needed to make the right diagnosis?	60
Principles of emergency treatment	60
Respiratory Failure	61
Type I and Type II Respiratory Failure	62
Principles of treatment	65
Acute Severe Asthma	66
Mechanisms	66
Who gets acute severe asthma and why?	66
What goes wrong during an attack?	66
Assessment of Acute Severe Asthma	68
Nursing the Patient With Acute Severe Asthma	70
Critical nursing tasks during the acute attack	71
Management of Acute Severe Asthma	72
Initial emergency treatment	72
Subsequent treatment	72
Assessing response	72
Acute Severe Asthma in Pregnancy	73
Answering Relatives' Questions in Severe Asthma	74
Upper Airway Obstruction: Not to Be Confused With Asthma	74
Chronic Obstructive Pulmonary Disease	75
Mechanisms	75
<i>COPD complicated by cor pulmonale</i>	77
<i>Long term oxygen therapy</i>	77
<i>Assessment of acute exacerbations of COPD</i>	77
<i>Controlled oxygen therapy</i>	80
<i>Bronchodilators</i>	81
<i>Antibiotics</i>	81
<i>Oral steroids</i>	81
<i>Non-invasive ventilation</i>	82
Nursing the Patient With COPD	85
Critical nursing tasks during the acute attack	86
Answering Relatives' Questions in COPD	88
Respiratory Infections and Pneumonia	89
Pneumonia	89
Signs and symptoms of pneumonia	89
Assessment of pneumonia	90

The severity score in pneumonia: CURB-65	90
Finding the cause of pneumonia	90
Assessing the effect of pneumonia on the patient	92
Management of pneumonia	92
Basic aims of treatment	92
Pleural effusion and pleural empyema	93
Aspiration pneumonia	94
Nursing the Patient With Pneumonia	94
Five critical nursing tasks during the acute attack	95
Watch for complications	96
Answering Relatives' Questions in Pneumonia	96
Spontaneous Pneumothorax	97
Safety Issues: Pleural Aspiration and Pleural Drainage	98
Nursing the Patient With a Chest Drain	100
Important nursing observations	101
Further Reading	102
 4. Acute Neurological Problems	 103
Introduction	103
Role of the Acute Medical Unit in Acute Neurological Problems	104
Ensuring the safety of the patient	104
Prioritising the initial management	104
Glasgow coma score and ABCDE: assessing and keeping the patient alive	104
Critical nursing observations	105
Managing 'medical' and 'neurological' coma	111
The underlying mechanism in coma	111
Practical management of coma	113
Importance of an eye-witness in coma	113
Responding to neurological deterioration	114
How the clinical state can change in the first hours of admission	115
Reaching appropriate outcomes	115
Making the correct diagnosis	115
Urgent admission to the acute stroke unit in an optimum condition	116
Avoiding major stroke after a transient ischaemic attack	116
Surviving intracranial sepsis	116
Reaching the neurosurgeons alive and on time	116
Full recovery from self-harm	116
Recovery from reversible causes of neurological emergencies	116
Stroke and Stroke-like Emergencies	117
Causes	117
Cerebral infarction	118
Transient ischaemic attacks	121
Intracerebral haemorrhage	122
Subarachnoid haemorrhage	124
Subdural haemorrhage	124

Extradural haemorrhage	125
Nursing the patient with a stroke: the first 24 h	126
Critical nursing observations and immediate management	126
Interventions in the first 24 h	129
<i>Acute drug interventions</i>	130
Answering relatives' questions on stroke	132
Meningococcal Meningitis	134
Clinical picture	135
Nursing the patient with suspected meningococcal meningitis	137
Nursing care	138
Critical nursing observations in the first 24 h	139
Nursing management apart from the critical tasks and observations	140
Answering relatives' questions in meningitis	140
Acute Severe Headache	142
Subarachnoid haemorrhage	142
The CT and lumbar puncture in subarachnoid haemorrhage	142
Nursing the patient with subarachnoid haemorrhage	143
Answering relatives' questions in subarachnoid haemorrhage	144
Lumbar puncture	145
Contraindications to a lumbar puncture	145
Indications on the Acute Medical Unit	145
Procedure	145
Xanthochromia: a practical guide to interpreting the CSF result in subarachnoid haemorrhage	148
Sudden Loss of Consciousness: Faints and Fits	148
The basic mechanisms: syncope	149
Cardiac syncope	150
Reflex syncope (also termed 'neurally mediated syncope')	150
Situational syncope	151
Driving	151
The basic mechanisms: epileptic seizures	151
Partial seizures	151
Generalised convulsions (tonic-clonic fitting)	152
Nursing the patient who has sudden loss of consciousness	152
Nursing tasks	152
Drugs commonly used in status epilepticus	155
Common reasons why management is unsuccessful	156
Sudden unexplained death in epilepsy	156
Pseudoseizures (non-epileptic seizures)	156
Management	157
Acute paralysis of the lower limbs	157
Spinal cord compression	157
Guillain-Barré syndrome	158
Recongnising acute illness in patients with chronic neurological disability	159
Further Reading	159

5. Gastroenterology	161
Introduction	161
Nausea and Vomiting: Underlying Mechanisms	162
The Patient Who Is Vomiting: the General Approach	162
Consider the underlying mechanisms and potential causes	162
Establish the history	162
Is this GI disease?	163
Is this drug-related?	163
Could this be raised intracranial pressure?	164
Could this be metabolic?	164
Nausea and Vomiting in Acute Medical Conditions	164
Migraine	164
Myocardial infarction	164
Sepsis	164
Acute gastric dilatation	164
Acute Upper Gastrointestinal Haemorrhage	165
Causes of Acute Bleeding	165
Peptic ulcer disease	167
<i>Helicobacter pylori</i> infection and bleeding peptic ulcers	167
Acute oesophagitis, gastritis, duodenitis, and acute erosions ('stress ulcers')	167
Mallory-Weiss tear	167
Gastro-oesophageal varices	168
Gastric and oesophageal cancers	168
Dieulafoy's erosion	168
Management of Upper Gastrointestinal Haemorrhage	168
Ensuring the safety of the patient: ABCDE	168
Who needs urgent endoscopy?	169
Assessing the degree of bleeding	169
Assessing the risk to the patient from the bleed	170
Risk assessment with the Blatchford and Full Rockall Scores	171
Looking for evidence of re-bleeding	172
Intravenous pantoprazole/omeprazole	174
Role of the nurse in facilitating communication	174
Answering Relatives' Questions in Acute Upper Gastrointestinal Bleeding	175
Important Questions to Ask the Patient or Relatives	176
Reassessing the Patient On Return From Endoscopy	176
Portal Hypertension and the Management of Oesophageal Varices	177
Fresh Rectal Bleeding	179
Acute Liver Failure and Hepatic Encephalopathy	180
Impairment of the consciousness level	181
Bleeding varices and clotting abnormalities	181

Sepsis	181
Metabolic abnormalities	181
Management of Acute Liver Failure in the First 24 h	182
Hepatic encephalopathy	182
Bleeding	182
Sepsis	182
Metabolic problems	183
Critical nursing tasks in acute liver failure	183
Acute Jaundice	186
Gallstones, acute cholecystitis and ascending cholangitis	186
Acute Abdominal Pain	186
Critical nursing tasks in acute abdominal pain	192
Important nursing tasks in acute abdominal pain	195
Acute Diarrhoea: Sources and Courses	196
Infective Diarrhoea	196
Assessment	197
Is this patient at special risk?	197
Nursing assessment in acute diarrhoea	198
Nursing management in acute diarrhoea	198
<i>Clostridium difficile</i> Diarrhoea	199
Infective Diarrhoea Versus Acute Ulcerative Colitis	201
Medical Conditions Presenting With Gastrointestinal Symptoms	203
Cardiovascular Disease	203
Congestion	203
Ischaemic bowel	203
Abdominal aneurysm	203
Drug-induced side effects	203
Cardiac cachexia	203
Respiratory Disease	203
Diaphragmatic pleurisy	203
Congestion in cor pulmonale	204
Steroid-induced side effects	204
Diabetes	204
Further Reading	204
 6. Diabetic Complications	 205
Diabetes on the Acute Medical Unit: The General Approach	205
Aims of this chapter	207
Normal Blood Sugar Control and the Nature of Diabetes	207
An Overview of Type I and Type II Diabetes	208
Type I diabetes	208
Type II diabetes	209
Recent Developments in the Treatment of Diabetes	209
Type I diabetes	209
Type II diabetes	209

Acute Medical Conditions Associated With Diabetes	210
Diabetic renal disease	211
Diabetic neuropathy	212
Cardiovascular disease	212
Cerebrovascular disease	213
Peripheral vascular disease	213
Blood Sugar Control in Adverse Medical Situations	213
How good should control be during acute severe illnesses?	213
Assessing control	214
Practical Management of Diabetes in Adverse Circumstances	218
Variable Rate Intravenous Insulin Infusion – VRIII	
('Sliding Scale') or a GKI?	219
Glucose infusion and a sliding scale of insulin (VRIII)	220
The DIGAMI regimen: an example of controlling the blood sugar	
in acute illness	221
Glucose, potassium and insulin	222
Could We (or Should We) Assess Obesity on the Acute	
Medical Unit?	227
Management of Acute Diabetic Emergencies	228
Diabetic Ketoacidosis	228
Causes of diabetic ketoacidosis	228
Underlying mechanism	228
Management	229
The DKA treatment regime	235
Restarting insulin and insulin naive patients	236
Nursing the patient with DKA	237
Answering relatives' questions in DKA	239
The importance of patients' and relatives' education in diabetes	239
Information for Diabetics: What to Do on Days When	
You Are Sick	240
Hyperosmolar Non-Ketotic Diabetic Coma	241
Hypoglycaemia	241
Symptoms	241
Causes	242
Hypoglycaemic unawareness	242
Management	243
Always seek the cause for hypoglycaemia	244
Infective Complications in Diabetes: The Acute Diabetic Foot	244
Assessment of the Diabetic Foot	245
How to look at the feet	246
Management	249
Further Reading	251
 7. Thromboembolic Disease	 253
Introduction	253
The Nature of the Disease	254
Thrombosis and Thromboembolisation	254

Mechanisms	254
Superficial thrombophlebitis	256
Deep vein thrombosis	256
Pulmonary thromboembolism	256
Reducing the Risk of Venous Thromboembolism	257
Tests to Identify Venous Thromboembolic Disease	258
Diagnostic approach: the two-level PE Wells score: likely or unlikely	258
Management of Pulmonary Thromboembolism	260
Critical nursing tasks in a severe acute pulmonary embolus	263
Important nursing tasks in acute pulmonary embolus	264
Pulmonary embolism in pregnancy	265
Answering Relatives' Questions in Pulmonary Embolism	265
Nursing the Patient With a Suspected Deep Vein Thrombosis	266
Nursing assessment of a possible deep vein thrombosis	266
<i>The two-level DVT Wells Score: likely and unlikely</i>	268
Other causes of acute calf pain	269
Other causes of a swollen painful leg	269
Management of a Deep Vein Thrombosis	272
AIM: to Prevent Extension of the Thrombosis and Prevent Embolisation	272
Outpatient management of venous thromboembolic disease	273
Anticoagulation therapy	273
Critical nursing tasks in a suspected DVT	276
Important nursing tasks in a suspected deep vein thrombosis	276
Answering Relatives' Questions in Deep Vein Thrombosis	277
Further Reading	279
 8. Deliberate Self-harm, Alcohol, and Substance Abuse	 281
Deliberate Self-harm	281
General Principles	281
Principles of Treatment	282
Who Commits Suicide?	282
Who is at a particularly high risk of suicide?	282
Which Type of Patients Are Admitted With Deliberate Self-harm?	283
The embarrassed and impulsive	283
The serious attempt	283
The recurrent attender	283
The high-risk self-harm	283
Why Do Patients Deliberately Harm Themselves?	284
Two high-risk patients	284
Nursing the Patient WITH Self-harm	285
Critical nursing tasks in deliberate self-harm	285
Activated charcoal	287
Important nursing tasks in deliberate self-harm	288
Relevant medical history	289
Psychosocial history	289

The Patient Who Refuses Treatment	291
Specific Overdoses	293
Benzodiazepines	293
Paracetamol Poisoning	295
Clinical picture of severe paracetamol toxicity	296
Immediate management	296
Late presentation (8–24 h) or staggered ingestion over several hours	297
Antidepressant Overdose	299
Management	300
Immediate management of tricyclic overdose	300
Carbon Monoxide Poisoning	301
Basic mechanisms	301
Clinical picture	301
Assessment and management	301
Alcohol Abuse	302
Problems of Alcohol in the Acute Medical Unit	302
How to Take a Drinking History	303
Acute Alcohol-Withdrawal Syndrome	304
Acute Alcohol Intoxication	306
Ethylene Glycol and Methanol: Antifreeze and Windscreen Washer Solution	307
Substance Abuse	307
Cocaine	307
Ecstasy	307
Liquid Ecstasy	308
Dystonic Reaction and Psychotropic Drugs	308
Heroin Abuse	309
Methods of heroin ingestion	310
Heroin overdose	310
Methadone therapy	310
Nursing assessment of the addict	311
Infections in Intravenous Drug Users	311
Special Risks to Members of Staff	312
Needle Stick Injuries	312
The nature of the risk	312
Outcome	313
What constitutes significant exposure?	313
What emergency action should be taken?	313
Risk assessment to identify the patient's infectivity	313
Hospital-Acquired Methicillin-Resistant <i>Staphylococcus aureus</i>	
Infections	314
Violent Incidents	314
Prevention	314
Management	315
Further Reading	316

9.	The ‘Social Admission’	317
	Introduction	317
	Common Errors and Omissions in the Admission of Elderly Patients	318
	Failure to Obtain an Adequate History	318
	Failure to Establish a Correct Drug History	318
	Failure to Make an Adequate Review of the Patient’s Previous Hospital Records	319
	Taking the History	319
	Taking a History From the Patient	319
	Taking a History From a Third Party	320
	Where to Go for Information	321
	Dealing With Relatives	321
	Liaising With the Medical Staff	321
	Falls	322
	The Cause of Falls	322
	Assessment After a Fall	323
	Critical Nursing Tasks in Assessment After a Fall	323
	How to Identify Postural Hypotension	325
	Important Nursing Tasks in Assessment After a Fall	325
	Additional Assessment on Examination	327
	Answering Relatives’ Questions in Patients Who Fall	327
	Immobility	329
	Critical Nursing Tasks in Assessing Immobility	330
	Important Nursing Tasks in Assessing Immobility	332
	Delirium	334
	Principles of Management	335
	Hypoxia	338
	Dementia	341
	The Diagnosis of Alzheimer’s Disease	342
	Nursing Observations for a Patient Who Has Required Sedation	343
	Nursing Home Admissions	343
	Ethical Issues and the Elderly Sick	345
	Who Should Decide?	345
	Withholding Versus Withdrawing Treatment?	346
	The Emergency Admission of Patients With a Terminal Disease	346
	Further Reading	348
10.	Multisystem Failure	349
	Shock: The Basic Mechanisms	349
	Cardiogenic shock	350
	Hypovolemic shock	352
	Redistributive (low-resistance) shock	352
	Acute Severe Hypotensive Collapse	353
	Importance of Immediate Resuscitation	354

Resuscitation of the patient with hypotensive collapse	355
Critical nursing tasks in assessing hypotensive collapse	357
Important nursing tasks in assessing hypotensive collapse	359
When do we use dopamine, dobutamine, and noradrenaline (norepinephrine) in patients with shock?	361
Ensuring Adequate Oxygen Delivery to Vital Organs:	
Maintaining the Oxygen Saturation and the Blood Pressure	362
Oxygen therapy	362
The blood pressure	365
When is a central line used?	365
Intravenous fluid resuscitation and fluid challenge	368
Which Critically Ill Patients May Need Transfer to Intensive Care/HDU?	369
Surviving Sepsis	370
Sepsis six	370
Anaphylactic Reaction	371
Management of anaphylactic shock	372
Answering Relatives' Questions in Shock	374
Emergency Blood Transfusion in Shock	375
Transfusion Reactions	376
Clinical features and basic management	376
Nursing assessment to identify a severe transfusion reaction	377
Massive Blood Transfusion	378
Acute Kidney Injury	379
Which patients are at particular risk from acute kidney injury?	381
Management of Acute Kidney Injury	382
Ensuring the safety of the patient	382
Completing the clinical assessment	384
Establishing a management plan	385
Critical nursing tasks in acute renal failure	386
Important nursing tasks in acute kidney injury	386
Answering Relatives' Questions in Acute Kidney Injury	388
Sudden Collapse and Cardiac Arrest	388
Common causes of the sudden collapse	390
Assessment of collapse	390
Diagnosing cardiac arrest	390
The Chain of Survival	391
Basic life support	391
Sequence of actions in basic life support	392
After basic life support	400
Treatable causes of cardiac arrest: 4H and 4T	404
Advanced airway management	406
When to stop the resuscitation procedure	406
Dealing With the Relatives of a Victim of Cardiac Arrest	406
Answering Relatives' Questions in Cardiac Arrest	407
The Aftercare of Patients Who Undergo Successful CPR	408

Do Not Attempt Resuscitation	408
Communication and explanation	409
A DNAR protocol	410
Important points about DNAR	410
Answering Relatives' Questions About 'Do Not Resuscitate'	
Decisions	411
Bereavement on the Acute Medical Unit	412
Critical nursing tasks when dealing with the bereaved	412
Important nursing tasks when dealing with the bereaved	413
Further Reading	414
 11. Emerging Problems: Outbreaks and Deliberate Releases—SARS, Toxins and Biologic Agents	 415
Introduction	415
How Infection Spreads	415
Severe Acute Respiratory Syndrome	417
Case Definition of Severe Acute Respiratory Syndrome	417
Management of a Possible Case of Severe Acute Respiratory Syndrome	418
Surgical Masks Versus Particulate Respirators	418
Other Emerging Infections	420
H1N1 2009 Influenza (Swine Flu)	421
Viral Haemorrhagic Fevers (VHFs): Ebola, Lassa, Marburg, Crimean-Congo.	421
Unusual Illnesses—Deliberate Release of Infectious and Chemical Agents	421
Deliberate Release of Infectious Agents	422
General Principles	422
Awareness and Recognition	423
Communication	423
Decontamination and Containment	424
Seek Early Advice	425
Poisoning With Biologic Agents	425
Examples of Potential Pathogens and Initial Symptoms	425
Poisoning With Nerve Agents	426
Antidote Administration	428
Breathing Support	428
Coma and Convulsion Care	428
Key Nursing Skills in Outbreaks and Deliberate Releases	428
Conclusion	429
Further Reading	430
 Index	 431
