Introduction	xii
<i>Organization of this book</i>	<i>xii</i>
<i>Microsoft certifications</i>	<i>xii</i>
<i>Errata, updates, and book support</i>	<i>xiii</i>
<i>Stay in touch</i>	<i>xiii</i>
Chapter 1 Design, implement, and manage hybrid networking	1
Skill 1.1: Design, implement, and manage a site-to-site VPN connection	1
Design a site-to-site VPN connection for high availability	2
Select an appropriate virtual network gateway SKU	4
Identify when to use policy-based VPN versus route-based VPN	5
Create and configure a local network gateway	6
Create and configure a virtual network gateway	7
Create and configure an IPsec/IKE policy	11
Diagnose and resolve VPN gateway connectivity issues	14
Skill 1.2: Design, implement, and manage a point-to-site VPN connection	20
Select an appropriate virtual network gateway SKU	21
Plan and configure RADIUS authentication	22
Plan and configure certificate-based authentication	24
Plan and configure Azure Active Directory (Azure AD) authentication	26
Implement a VPN client configuration file	28
Diagnose and resolve client-side and authentication issues	30
Skill 1.3: Design, implement, and manage Azure ExpressRoute	31
Choose between provider and direct model (ExpressRoute Direct)	32
Design and implement Azure cross-region connectivity between multiple ExpressRoute locations	33
Select an appropriate ExpressRoute SKU and tier	34
Design and implement ExpressRoute Global Reach	35

Design and implement ExpressRoute FastPath	37
Choose between private peering only, Microsoft peering only, or both	38
Configure private peering	39
Configure Microsoft peering	40
Create and configure an ExpressRoute gateway	41
Connect a virtual network to an ExpressRoute circuit	42
Recommend a route advertisement configuration	43
Configure encryption over ExpressRoute.	44
Implement Bidirectional Forwarding Detection	45
Diagnose and resolve ExpressRoute connection issues	46
Chapter summary	46
Thought experiment.	47
Thought experiment answers	48

Chapter 2 Design and implement core networking infrastructure 51

Skill 2.1: Design and implement private IP addressing for virtual networks	51
Create a virtual network	52
Plan and configure subnetting for services	54
Plan and configure subnet delegation	59
Plan and configure subnetting for Azure Route Server	60
Skill 2.2: Design and implement name resolution	60
Design public DNS zones	61
Design private DNS zones	63
Design name resolution inside a virtual network	65
Configure a public or private DNS zone	66
Link a private DNS zone to a virtual network	67
Skill 2.3: Design and implement cross-VNet connectivity.	68
Implement virtual network peering	69
Design service chaining, including gateway transit	72
Design VPN connectivity between virtual networks	74
Skill 2.4: Design and implement an Azure Virtual WAN architecture	74
Design an Azure Virtual WAN architecture, including selecting SKUs and services	75

Create a hub in Virtual WAN	77
Connect a virtual network gateway to Azure Virtual WAN	78
Create a network virtual appliance in a virtual hub	83
Configure virtual hub routing	85
Chapter summary	88
Thought experiment.....	89
Thought experiment answers	90

Chapter 3 Design and implement routing 91

Skill 3.1: Design, implement, and manage virtual network routing	91
Design and implement user-defined routes	92
Associate a route table with a subnet	95
Configure forced tunneling	97
Diagnose and resolve routing issues	97
Skill 3.2: Design and implement an Azure load balancer	100
Choose an Azure Load Balancer SKU	101
Choose between public and internal	102
Create and configure an Azure load balancer	102
Implement a load balancing rule	106
Create and configure inbound NAT rules	110
Create explicit outbound rules for a load balancer	112
Skill 3.3: Design and implement Azure Application Gateway	113
Recommend Azure Application Gateway deployment options	114
Choose between manual and autoscale	115
Create a backend pool	120
Configure HTTP settings	122
Configure health probes	123
Configure listeners	125
Configure routing rules	126
Configure Transport Layer Security (TLS)	128
Configure rewrite policies	131
Skill 3.4: Implement Azure Front Door	134
Choose an Azure Front Door SKU	134
Configure health probes	137

Skill 4.4: Monitor networks.....	189
Configure network health alerts and logging by using Azure Monitor	190
Create and configure a Connection Monitor instance	194
Configure and use Traffic Analytics	197
Enable and configure diagnostic logging	198
Configure Azure Network Watcher	199
Chapter summary	200
Thought experiment.....	201
Thought experiment answers	202

Chapter 5	Design and implement private access to Azure services	203
------------------	--	------------

Skill 5.1: Design and implement Azure Private Link service and private endpoints.	203
Create a Private Link service	204
Plan and create private endpoints	207
Integrate Private Link with DNS	211
Integrate a Private Link service with on-premises clients	211
Skill 5.2: Design and implement service endpoints.	213
Create service endpoints	213
Configure service endpoint policies	215
Configure service tags	218
Skill 5.3: Configure VNet integration for dedicated platform as a service (PaaS) services	218
Configure App Service for regional VNet integration	218
Configure Azure Kubernetes Service (AKS) for regional VNet integration	220
Configure clients to access App Service Environment	221
Chapter summary	222
Thought experiment.	223
Thought experiment answers	224
