Preface	xi
Acknowledgments	xv
Author	xvii
Chapter 1 Introduction	1
1.1 Typical Measurement Systems	1
1.1.1 Transducers	2
1.1.2 Further Study: The Transducer	3
1.1.3 Analog Signal Processing	4
1.2 Sources of Variability: Noise	6
1.2.1 Electronic Noise	8
1.2.2 Signal-to-Noise Ratio	9
1.3 Analog Filters: Filter Basics	10
1.3.1 Filter Types	10
1.3.2 Filter Bandwidth	11
1.3.3 Filter Order	12
1.3.4 Filter Initial Sharpness	12
1.4 Analog-to-Digital Conversion: Basic Concepts	14
1.4.1 Analog-to-Digital Conversion Techniques	15
1.4.2 Quantization Error	16
1.4.3 Further Study: Successive Approximation Analog-to-Digital Conversion	17
1.5 Time Sampling: Basics	19
1.5.1 Further Study: Buffering and Real-Time Data Processing	21
1.6 Data Banks	22
Problems	23
Chapter 2 Basic Concepts	25
2.1 Noise	25
2.1.1 Ensemble Averaging	27
2.1.2 MATLAB® Implementation	28
2.2 Data Functions and Transforms	29
2.2.1 Comparing Waveforms: Vector Representation	30
2.2.2 Signal Analysis: Transformation and Basis Functions	32
2.3 Convolution, Correlation, and Covariance	35
2.3.1 Convolution and the Impulse Response	35
2.3.2 Covariance and Correlation	39
2.3.3 Covariance, Correlation, and Autocorrelation Matrices	40
2.3.4 MATLAB® Implementation	42
2.4 Sampling Theory and Finite Data Considerations	46
2.4.1 Edge Effects	51
Problems	53
Chapter 3 Spectral Analysis: Classical Methods	55
3.1 Introduction	55
3.2 Fourier Transform: Fourier Series Analysis	57

3.2.1	Periodic Functions	57
3.2.1.1	Symmetry	60
3.2.2	Discrete-Time Fourier Analysis	62
3.3	Aperiodic Functions	65
3.3.1	Frequency Resolution	66
3.4	MATLAB® Implementation: Direct FFT	67
3.5	Truncated Fourier Analysis: Data Windowing	70
3.6	MATLAB® Implementation: Window Functions	73
3.7	Power Spectrum	75
3.8	MATLAB® Implementation: The Welch Method for Power Spectral Density Determination	78
	Problems	81
Chapter 4 Digital Filters		83
4.1	Introduction	83
4.2	Z-Transform	83
4.2.1	Digital Transfer Function	84
4.2.2	MATLAB® Implementation	86
4.3	Finite Impulse Response (FIR) Filters	88
4.3.1	FIR Filter Design	89
4.3.2	Derivative Operation: The Two-Point Central Difference Algorithm	93
4.3.3	MATLAB® Implementation	95
4.3.4	Filter Design and Application Using the MATLAB® Signal Processing Toolbox	98
4.3.4.1	Single-Stage FIR Filter Design	99
4.3.4.2	Two-Stage FIR Filter Design	100
4.4	Infinite Impulse Response (IIR) Filters	106
4.4.1	MATLAB® Implementation IIR Filters	107
4.4.2	Single-Stage IIR Filter Design	107
4.4.3	Two-Stage IIR Filter Design: Analog Style Filters	109
	Problems	111
Chapter 5 Spectral Analysis: Modern Techniques		115
5.1	Parametric Methods	115
5.1.1	Yule-Walker Equations	120
5.1.2	MATLAB® Implementation	122
5.2	Nonparametric Analysis: Eigenanalysis Frequency Estimation	127
5.2.1	MATLAB® Implementation	128
	Problems	136
Chapter 6 Time–Frequency Analysis		139
6.1	Basic Approaches	139
6.2	Short-Term Fourier Transform: The Spectrogram	139
6.2.1	MATLAB® Implementation: The Short-Term Fourier Transform	140
6.3	Wigner-Ville Distribution: A Special Case of Cohen’s Class	147
6.3.1	Instantaneous Autocorrelation Function	147
6.4	Choi-Williams and Other Distributions	152
6.4.1	Analytic Signal	153
6.5	MATLAB® Implementation	154
6.5.1	Wigner-Ville Distribution	154

6.5.2	Choi-Williams and Other Distributions.....	157
	Problems.....	163
Chapter 7	Wavelet Analysis	165
7.1	Introduction.....	165
7.2	Continuous Wavelet Transform.....	167
7.2.1	Wavelet Time–Frequency Characteristics	168
7.2.2	MATLAB® Implementation	171
7.3	Discrete Wavelet Transform.....	174
7.3.1	Filter Banks	175
7.3.1.1	Relationship between Analytical Expressions and Filter Banks	179
7.3.2	MATLAB® Implementation	180
7.3.2.1	Denoising	185
7.3.2.2	Discontinuity Detection.....	187
7.4	Feature Detection: Wavelet Packets	189
	Problems.....	193
Chapter 8	Advanced Signal Processing Techniques: Optimal and Adaptive Filters	195
8.1	Optimal Signal Processing: Wiener Filters	195
8.1.1	MATLAB® Implementation	198
8.2	Adaptive Signal Processing.....	202
8.2.1	Adaptive Line Enhancement (ALE) and Adaptive Interference Suppression.....	205
8.2.2	Adaptive Noise Cancellation (ANC).....	206
8.2.3	MATLAB® Implementation	207
8.3	Phase-Sensitive Detection.....	213
8.3.1	AM Modulation.....	213
8.3.2	Phase-Sensitive Detectors.....	215
8.3.3	MATLAB® Implementation	218
	Problems.....	220
Chapter 9	Multivariate Analyses: Principal Component Analysis and Independent Component Analysis.....	223
9.1	Introduction: Linear Transformations	223
9.2	Principal Component Analysis.....	226
9.2.1	Determination of Principal Components Using Singular Value Decomposition	229
9.2.2	Order Selection: The Scree Plot.....	230
9.2.3	MATLAB® Implementation	230
9.2.3.1	Data Rotation	230
9.2.4	PCA Evaluation	232
9.3	Independent Component Analysis	236
9.3.1	MATLAB® Implementation	241
	Problems.....	245
Chapter 10	Fundamentals of Image Processing: MATLAB® Image Processing Toolbox.....	247
10.1	Image Processing Basics: MATLAB® Image Formats	247

10.1.1	General Image Formats: Image Array Indexing	247
10.1.2	Data Classes: Intensity Coding Schemes	248
10.1.3	Data Formats	250
10.1.4	Data Conversions	250
10.2	Image Display	253
10.3	Image Storage and Retrieval	257
10.4	Basic Arithmetic Operations	258
10.5	Advanced Protocols: Block Processing	264
10.5.1	Sliding Neighborhood Operations	264
10.5.2	Distinct Block Operations	268
	Problems	272
Chapter 11	Spectral Analysis: The Fourier Transform	275
11.1	Two-Dimensional Fourier Transform	275
11.1.1	MATLAB® Implementation	276
11.2	Linear Filtering	279
11.2.1	MATLAB® Implementation	280
11.2.2	Filter Design	281
11.3	Spatial Transformations	286
11.3.1	MATLAB® Implementation	288
11.3.1.1	Affine Transformations	288
11.3.1.2	General Affine Transformations	290
11.3.1.3	Projective Transformations	292
11.4	Image Registration	296
11.4.1	Unaided Image Registration	297
11.4.2	Interactive Image Registration	300
	Problems	302
Chapter 12	Image Segmentation	305
12.1	Introduction	305
12.2	Pixel-Based Methods	305
12.2.1	Threshold Level Adjustment	306
12.2.2	MATLAB® Implementation	309
12.3	Continuity-Based Methods	311
12.3.1	MATLAB® Implementation	312
12.4	Multithresholding	317
12.5	Morphological Operations	319
12.5.1	MATLAB® Implementation	321
12.6	Edge-Based Segmentation	326
12.6.1	Hough Transform	327
12.6.2	MATLAB® Implementation	328
	Problems	332
Chapter 13	Image Reconstruction	335
13.1	Introduction	335
13.1.1	CT, PET, SPECT	335
13.1.2	Filtered Back-Projection	339
13.1.3	Fan Beam Geometry	341
13.1.4	MATLAB® Implementation	342
13.1.4.1	Radon Transform	342

13.1.4.2	Inverse Radon Transform: Parallel Beam Geometry	342
13.1.4.3	Radon and Inverse Radon Transform: Fan Beam Geometry	344
13.2	Magnetic Resonance Imaging	346
13.2.1	Basic Principles	346
13.2.2	Data Acquisition: Pulse Sequences	349
13.3	Functional MRI	351
13.3.1	MATLAB® Implementation	352
13.3.2	Principal Component and Independent Component Analyses	354
	Problems	359

Chapter 14 Classification I: Linear Discriminant Analysis and Support

	Vector Machines	361
14.1	Introduction	361
14.1.1	Classifier Design	364
14.2	Linear Discriminators	365
14.3	Evaluating Classifier Performance	371
14.4	Higher Dimensions: Kernel Machines	376
14.5	Support Vector Machines	378
14.5.1	MATLAB® Implementation	381
14.6	Machine Capacity: Overfitting or “Less Is More”	385
14.7	Cluster Analysis	389
14.7.1	The k -Nearest Neighbor Classifier	389
14.7.2	The k -Means Clustering Classifier	391
	Problems	396

Chapter 15 Adaptive Neural Nets399

15.1	Introduction	399
15.1.1	Neuron Models	399
15.2	McCullough-Pitts Neural Nets	403
15.3	Gradient Descent Method or Delta Rule	407
15.4	Two-Layer Nets: Backpropagation	411
15.5	Three-Layer Nets	416
15.6	Training Strategies	419
15.6.1	Stopping Criteria: Cross-Validation	419
15.6.2	Momentum	420
15.7	Multiple Classifications	426
15.8	Multiple Input Variables	428
	Problems	429

Annotated Bibliography	433
Index	437
