INTRODUCTION	7
Chapter 1	
Photovoltaic system components	9
1.1. Solar cells - short description	9
1.2. Modules and photovoltaic panels	11
1.3. Photovoltaic system	12
1.4 Types of deposition methods for solar cells	13
1.4.1 Sputter deposition	13
1.4.2 Types of sputter deposition	14
Chapter 2	
Photovoltaic nanostructures	18
2.1. Solar cell classification	18
Chapter 3	
Quantum efficiency measurement systems	20
3.1. Parameters overview	20
3.2. The efficiency of energy conversion	23
Chapter 4	
Equipments and technological procedures	24
4.1. Technological equipment for execution and process control	24
4.2. Measuring equipments	31
Chapter 5	
Solutions for nanostructures	33
5.1 Replacement of conventional supports with plastic supports	34
5.2 Technological procedures to achieve photovoltaic cell with optimized quantum efficiency ISO 9001 and ISO 14001 certified	36
5.2.1 Procedure for selection of flexible support of Kapton for photovoltaic cell / certification ISO 9001/ISO 14001	36
5.2.2. The procedure to create active target CIGS for solar cell model / certification ISO 9001/ISO 14001	41
5.2.3. The procedure to create solar cell model / certification ISO 9001/ISO 14001	49

Chapter 6	
Measurements and results	55
6.1 Quantum efficiency measurement	55
Conclusions	67
C.1. General conclusions	67
C.2 Personal contributions	68
Bibliography	70
